

INNOVATIVE METHODS OF MOTIVATING STUDENTS TO PARTICIPATE IN PUBLIC LIFE: THE EXPERIENCE OF THE NEW UZBEKISTAN

Abdullayeva Asila Abdulkhadiyevna
Researcher Of Namangan State University, Uzbekistan

ABSTRACT

The article explores modern approaches to stimulating student activity in the public sphere using the example of New Uzbekistan. The authors consider a variety of innovative methods and practices used in the university environment in order to involve students in social and cultural initiatives. The article analyzes in detail mentoring programs, virtual platforms for the exchange of ideas, as well as the use of technology to improve communication and joint activities of student organizations. The results obtained and the experience of the New Uzbekistan can serve as an example for other countries and educational institutions seeking to create a stimulating environment for students to actively participate in public life.

KEYWORDS: Innovations in education, motivation of students, social activity, New Uzbekistan, student social life, participation in social projects, development of leadership skills, motivation technologies in education, student organizations, electronic platforms for interaction.

INTRODUCTION

In the modern world of education, the emphasis is shifting from the traditional academic sphere to the development of social skills and civic responsibility of students. New Uzbekistan introduces innovative methods of motivating students to actively participate in public life, creating a favorable environment for the formation of leadership qualities and professional growth. As part of the reforms in the education of the New Uzbekistan, the emphasis is on the introduction of modern educational programs that contribute to the development of not only technical skills, but also the social competence of students. The curricula include courses aimed at developing communication skills, leadership and teamwork.

New Uzbekistan actively supports student initiatives by providing financial and organizational support for the creation of public associations and projects[1]. This includes student clubs, academic circles, charity events and other forms of social activity. Students are provided with opportunities to actively participate in solving social problems through participation in volunteer and charity projects. This not only contributes to the development of social responsibility, but also strengthens the sense of community and patriotism among young people. Regular forums, conferences and seminars provide students with an area to share experiences, ideas and knowledge. These activities contribute to the development of creativity, stimulate research activity and form professional skills.

The use of modern technologies, such as online platforms for learning and sharing experiences, mobile applications for project coordination and communication, game elements in educational programs, help to make learning more exciting and motivating.

In recent years, Uzbekistan has been undergoing significant changes in various fields, including education and student life[2]. One of the key goals of the country has become the active involvement of young people in public life. This was made possible by the introduction of innovative methods of motivating students. In this article, we will consider several effective approaches that contribute to the active participation of students in public and educational initiatives. In modern technology, electronic platforms provide excellent opportunities for students to exchange ideas, create interest groups, and coordinate community projects. In Uzbekistan, student communities actively use social networks and specialized applications to discuss and implement their initiatives.

Stimulating competitiveness among students can be considered one of the successful methods of motivation. Various competitions are held in Uzbekistan, including social responsibility initiatives, scientific projects and creative contests. The winners and participants of such events receive not only financial incentives, but also the opportunity to draw attention to their ideas and research[3]. Organizing student conferences and forums is an effective way to encourage young people to actively participate in scientific and social life. Regular student events are held in New Uzbekistan, where students can present their research, share experiences and find like-minded people for joint activities.

Establishing partnerships between universities, student organizations, and businesses can serve as a source of motivation for students. Uzbekistan is actively developing cooperation with corporations and government agencies, providing students with the opportunity to participate in projects, internships and experience exchanges. The development of educational programs focused on the real needs of society contributes to the formation of a responsible citizen. Projects aimed at solving social problems involve students in active activities, while developing their professional and leadership skills. The introduction of an incentive system for students who actively participate in public activities stimulates the formation of a positive attitude towards civic initiatives. Awards, certificates and the opportunity to participate in prestigious events create an additional incentive for students to invest their efforts in community projects. The creation of a mentoring system, where experienced specialists and professors help students in the implementation of their social ideas, promotes the development of creativity and self-confidence[4]. Mentoring support also contributes to the creation of strong teams capable of solving current problems. The integration of courses aimed at the formation of civic responsibility and active citizenship into the curricula of students creates a conscious basis for their participation in public life. Learning social and communication skills is also an important part of this approach.

CONCLUSION

The experience of the New Uzbekistan in the field of motivating students to participate in public life underlines the importance of innovation in the educational system. An effective combination of electronic technologies, competitions, student conferences and cooperation with external partners creates a favorable environment for the formation of an active civic position among students, which is a key factor in the development of society as a whole. The experience of the New Uzbekistan shows that innovative methods of motivating students in public life are an effective tool for the formation of civic qualities, professional growth and

readiness for an active life in modern society. These practices can serve as inspiration for other countries and educational systems to find new approaches to youth development.
