Keywords: - Society, education system, national and universal values, human dignity, national values, physical development, management, new technologies, education system, development, educational process, healthy and harmonious, upbringing of the child's personality.

Introduction:-

Today, the development of science, engineering and technology, changing the needs of society, changing the paradigm of education in developed and developing countries of the world, the educational process depends on the development of skills to apply knowledge gained from theoretical knowledge. 'is changing. Building a democratic state governed by the rule of law and civil society in our country The upbringing of a harmoniously developed generation plays an important role in Our future Creating a healthy social environment in the education of young people, which is the foundation of radical reform of the education system, national and universal values Restoration and respect are important. An enlightened person can selflessly fight for human dignity, the values of the nation, in a word, self-awareness, living in a free and independent society, for a worthy and prestigious place of our independent state in the world community. 'ladi. Pedagogy develops based on the principles of development of society. Today, this process is in full swing. In particular, the work being done to build the rule of law shows that the national consciousness is growing day by day. The future of our country largely depends on how our children will be educated in the future.

The origin of pedagogical activity is ancient in human history goes back in time. It is an integral part of professional educational activities formed as. As you know, in general education schools, vocational colleges and to educate young people in academic high schools trainees are called teachers, educators, mentors. The teaching profession is one of the oldest professions and is a pedagogical skill and the emergence of teaching in human society, that is, human beings Experiences gained: in the field of behavior, attitudes, cocktails the first experiences, traditions, mental, moral, divine knowledge to the youth teaching: after writing was invented, teaching reading, writing, it was established is inextricably linked with the emergence of early schools. The famous Czech educator J.A. Comenius in his book "The Great Didactics" shows that in ancient times, parents usually raised their children in the family. But parents also brought up their children differently at that time, which, of course, was due to the demands of the parents. Although some parents have enough experience in educating children, most of them do not have enough knowledge, skills and abilities. Sometimes parents do not take the time to raise their children. For this reason, many families have taught their children to educated, hard-working, experienced special people. Such people who educate young people are called educators.

They were in a very difficult situation in their early education. The main reason for this is the lack of pedagogical skills in education. With the emergence of the teaching profession, the foundations of pedagogical skills began to develop. Gradually, these professionals began to unravel the secrets of mastery in the field of education. The great Czech educator Jan Amos Comenius pays special attention to his teaching skills from his pedagogical theory. In his work "Mother's School" pays special attention to the skills of the educator in the upbringing of children of preschool age, the educator at this age mainly teaches children moral qualities, ie correct vocabulary, kindness, self-discipline and self-discipline. Respect for older children suggests that attention should be paid to inculcating concepts such as caring, hard work, and generosity. In "The Open Door of Languages and All Sciences" in the teaching of mother tongue sciences, in "Physics" and "Astronomy" the peculiarities of the teaching of these subjects and the skill of the teacher play an important role in it. A teacher's skill depends primarily on how well he or she prepares for the lesson, making effective use of the growing opportunities available. He should be regular and meaningful, purposefully increase his knowledge, enrich his experience with new methods. The purpose of the lesson is to define specific pedagogical tasks as a guarantee of success. The

purpose of each lesson is to carry out educational, developmental tasks.
